5 PHASES OF DRINKING WATER EXTRACTION

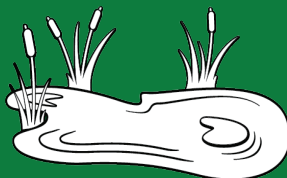

1.

Drawing water from the Drava river into the submerged lake.

2.

The water in the lake disappears.
The soil is its natural filter.

3.

With the help of nearby fountains
We draw water from the ground again.

4.

Finally, we clean the water
by filtration through sand -
charcoal filters for the purpose of filtration

5.

Quality drinking water
is ready for use
